

What Can Be Done About A Sleep Disorder?

Most of the disorders mentioned can be effectively treated once an accurate diagnosis is made. Some conditions require medication. Others may require a change in daily habits and work schedules. When sleep apnea is present, we will provide a variety of treatment alternatives. After the sleep study is completed and the results are analyzed, the Center's recommendations are sent back to the referring physician for appropriate treatment.

Referral to the Center

The Sleep & Diagnostic Center accepts patients on physician referral for evaluation and/or testing. Persons who are not under medical care may contact the Center for an appointment with one of the Center's physicians for a sleep evaluation.
